Progress Report 20/11/2022

-We investigated other existing apps to look for functionality gaps that we could target.
-We installed squid on the raspberry pi so that we could use it as a web proxy.
-We tested to make sure we could update a squid config file on the pi and verify that squid updates its active running config accordingly.
-We investigated to figure out what capabilities squid has. We tested its capability of blocking websites and restricting access at certain times of day.
-We completed our project proposal document and presentation.
